

# High Performance Home Building Event: Training + Roundtable

Presented by **Northwest ENERGY STAR® Homes**

December 9th, 2008 | Lake Oswego, OR

ENERGY STAR®, LEED®, Earth Advantage®, Performance Tested Comfort Systems® - all of these programs seek to get energy efficient features into new homes. They offer builders competitive advantages in the marketplace in addition to providing homeowners better built, more comfortable homes with lower operating costs. Everyone recognizes that getting energy savings built-into houses is important, but there are still questions about the best way to get it done.

We invite you to attend **one or both** of the events below to learn more about energy efficient building programs in Oregon.

## ▶▶ **Advanced Building Science Training | 11:30am - 3:30pm**

Advanced Building Science is an in-depth workshop for builders, remodelers and installers with a concrete foundation in basic building science. The workshop will focus on building science principles, best practices and progressive techniques for energy-efficient, durable buildings and remodels. Participants will discover effective applications and reasoning for preventing heat loss by creating a strong building envelope, resulting in comfortable clients living in energy-efficient buildings. Additionally, industry professionals will explain cost-saving techniques and demonstrate significant advantages for both the builder and homeowner on topics including ductless heat pumps, double-stud walls and window installations.

**Cost: \$75 for Energy Trust of Oregon, Earth Advantage, NEEA and HBA members. \$95 for non-members.**

## ▶▶ **High Performance Home Roundtable\* | 4:00 - 6:00pm**

We welcome you to join Northwest ENERGY STAR, Earth Advantage and the Oregon Department STAR for FREE refreshments and a roundtable discussion to determine the best way to get these features into homes. Discuss Oregon's high performance home building programs and resources. How can homes programs and utilities serve the needs of the home building industry to get more high performance homes built in Oregon? This is your opportunity to tell the "experts" what really works and what doesn't.

**Cost: FREE! Includes complimentary host bar**
